EDUCATION

B.Tech in Artificial Intelligence and Data Science Nov 2022 – Jun 2026
PRIST University, Thanjavur CGPA : 7.44

SKILLS

- **Languages:** Java, SQL
- **Web Technologies:** HTML5, CSS3, JavaScript, React.js
- **Core java:** Data Structures & Algorithms (DSA), Object-Oriented Programming (OOP), Multithreading
- **Java 8 Features:** Lambda Expressions, Stream API
- **Backend & APIs:** Spring Boot, Spring MVC, Spring JDBC, Hibernate, RESTful API Design
- **Cloud:** Amazon AWS
- **Databases & Caching:** MySQL, Redis
- **Tools & Methodology:** Git, GitHub, Maven, Postman, IntelliJ IDEA, Eclipse

EXPERIENCE

***Cognifyz IT Solution Pvt.Ltd* – Java Development Intern** Aug 2026 – Sep 2026

- Developed a full-stack personal finance application using Java, Spring Boot, React, and MySQL to manage income, expenses, and categories.
- Built RESTful CRUD APIs using Spring MVC, Spring Data JPA, and Hibernate with user-specific data management.
- Implemented JWT authentication and role-based authorization using Spring Security to secure financial data and APIs.
- Added DTOs, validation, exception handling, pagination, sorting, and search/filter features for reliable API operations.
- Developed financial dashboard APIs for income, expenses, balance, monthly summaries, and category-wise spending.

PROJECTS

API Performance Monitoring Starter with Optimization Mar 2026 – May 2026
Tech stack: Java, Spring Boot, Hibernate, MySQL, React.js

- Developed a reusable Spring Boot performance monitoring starter using Java, Micrometer, and Spring Boot Actuator to track REST API response times, request counts, and application metrics across multiple endpoints.
- Identified potential SQL performance bottlenecks, including slow queries and N+1 query patterns, using JDBC instrumentation and Hibernate; implemented query optimization strategies to improve database access efficiency.
- Optimized and benchmarked REST API performance using Spring Data JPA, JPQL, and Apache JMeter, targeting a reduction in average response time from 800 ms to 300 ms (62.5%) under comparable test conditions.
- Automated performance measurement and regression testing using JUnit 5, Mockito, and JMeter, generating before-and-after performance reports to validate optimizations and detect performance regressions.

Malicious URL Detection System Dec 2025 – Mar 2026
Tech stack: Python, Scikit-learn,HTML, CSS, JavaScript

- Collaborated with project teammates to identify requirements and plan the overallsystem workflow.
- Designed and developed a machine learning model to detect malicious URLs by analyzing URL patterns, structure, and behavior indicators.
- Implemented feature extraction techniques to classify URLs as safe or harmful with improved accuracy.
- Conducted testing using sample datasets, reviewed results, and optimized detection rules to enhance system performance.
- Prepared documentation, explained project architecture, and presented the solution during academic evaluation.
